

# LearnMaster-Tutorial:

## Creating a new Dataset:

- To create a new Dataset, click File → new Dataset
- In the up-popping window, enter your questions and the correct answers. Note that both the question- and the answer-textbox must not be empty, the description-textbox however may be left empty
- After entering your data, click on "Save as new".
- Repeat the process from step two on until you entered all your data
- To save your dataset, click on File → Save Dataset

## Editing an existing Dataset:

- Go to File → Load Dataset and load the dataset you want to edit
- Go to Edit → Edit Dataset
- After loading the dataset, you can either add new data to it following the steps above or modify already existing data by clicking on Save as Modified

## Starting a test:

- To start a test, select File → Load Dataset if you have not already loaded one.
- Click on File → Start Test to start the test
